#### **DETAILED ACTION**

## Response to Amendment

1. Applicant's amendment was received on 1/2/08 and has been entered and made of record. Currently, claims 1-4 and 10-20 are pending.

### Response to Arguments

2. Applicant's arguments, see pages 10-16 of the remarks, filed 1/2/08, with respect to the rejection(s) of claim(s) 1, 2, 4, 10-12, and 14-17 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art.

# Claim Rejections - 35 USC § 103

- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Claims 1-2, 4, 10-12, and 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roztocil in view of Kemp (US 2001/0078160).

10/635,479

Art Unit: 2625

Regarding claim 1, Roztocil discloses a method of managing workflow in a commercial printing environment including a designer location and a print service provider location, said method comprising: a digital printer establishing a closed-loop communication link between the designer location and the print service provider location (see Fig. 1 and paragraph 22), the digital printer sending current configuration information stored within memory of the digital printer to the designer location via the closed-loop communication link (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), creating a press ready file at the designer location using the current configuration information received from the digital printer via the closed-loop communication link (see Fig. 1 and paragraphs 23, 25, and 27-28), submitting the press ready file from the designer location to the print service provider location via the closedloop communication link (see paragraphs 22 lines 8-13, 25 lines 9-11, 29, and 32 lines 22-26) and receiving at the print service provider location a printed output of the press ready file from the digital printer (see Fig. 1 and paragraphs 29-30, 33 lines 2-4, 45-48, and 56).

Roztocil does not disclose expressly packaging the printed output at the print service provider location using an automated packaging device.

Kemp discloses packaging the printed output at the print service provider location using an automated packaging device (see Fig. 9 and paragraphs 41 and 64).

Regarding claim 10, Roztocil discloses a device for use with a design-to-press workflow in a commercial printing environment including a designer location, a print service provider location and a closed-loop communication link between them, said

10/635,479

Art Unit: 2625

device comprising: a memory for storing current configuration information about the device (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52) and a communication module for connecting to the closed-loop communication link to communicate the current configuration information to the designer location and the print service provider location for consideration in design and preflight stages of the workflow (see Fig. 1 and paragraphs 23, 25, 27-28, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52).

Roztocil does not disclose expressly an automated packaging device.

Kemp discloses packaging the printed output at the print service provider location using an automated packaging device (see Fig. 9 and paragraphs 41 and 64).

Regarding claim 11, Roztocil discloses a system for managing workflow in a commercial printing environment, said system comprising: a digital printer comprising memory that stores current configuration information about the digital printer and a communications module that is used to communicate with other devices over a network (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), wherein the digital printer is configured to: establish a closed-loop communication link with a designer location at which print jobs are created and with a print service provider location at which the print jobs are processed (see Fig. 1 and paragraph 22), send the current configuration information stored within digital printer memory to the designer location via the closed-loop communication link (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), and generate printed outputs associated with the print jobs (see paragraphs 22 lines 8-13, 25 lines 9-11, 29, and 32 lines 22-26), and a device

10/635,479

Art Unit: 2625

comprising memory that stores current configuration information about the device and a communications module that is used to communicate with other devices over a network (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), wherein the digital printer is configured to: communicate over the closed-loop communication link with the designer location and with the print service provider location, send the current configuration information stored within the device memory to the designer location via the closed-loop communication link (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52).

Roztocil does not disclose expressly an automated packaging device to package the printed outputs generated by the digital printer according to the instructions associated with the print job.

Kemp discloses an automated packaging device to package the printed outputs generated by the digital printer according to the instructions associated with the print job (see paragraphs 40-41 and 64).

Roztocil & Kemp are combinable because they are from the same field of endeavor, printing based on printer capabilities.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the packaging device, as described by Kemp, with the system of Roztocil.

The suggestion/motivation for doing so would have been to enable a user to receive his/her document(s) when, how, and where they desire to increase overall system efficiency and enhance user operability.

10/635,479

Art Unit: 2625

Therefore, it would have been obvious to combine Kemp with Roztocil to obtain the invention as specified in claims 1, 10, and 11.

Regarding claims 2 and 12, Kemp further discloses wherein the automated packaging device is a Design-to-Ship enabled packaging device that also forms part of the closed-loop communication link (see Fig. 9 and paragraphs 41 and 64).

Regarding claim 4, Roztocil further discloses verifying at the print service provider location that the press ready file will be produced at the print service provider location as instructed by information contained in the press ready file and, if not, correcting the press ready file to ensure production substantially as designed (see paragraphs 29-30, 45-48, and 56).

Regarding claim 14, Kemp further discloses wherein the digital printer sending current configuration information comprises the digital printer sending a table containing the current configuration information to the designer location (see paragraph 84).

Regarding claim 15, Roztocil further discloses wherein creating a press ready file at the designer location comprises adjusting at the designer location a print job to match capabilities of the digital printer relative to the current configuration information for the printing device (see Fig. 1 and paragraphs 29-30, 33 lines 2-74, 45-48, and 56).

Regarding claim 16, Roztocil further discloses the designer location updating a job ticket associated with the print job (see Fig. 1 and paragraphs 29-30, 33 lines 2-74, 45-48, and 56).

10/635,479

Art Unit: 2625

Regarding claim 17, Roztocil further discloses a preflight module of the print service provider location receiving the press ready file, reading the updated job ticket, requesting from the digital printer the current configuration information via the closed-loop communication link, and determining whether or not the digital printer is capable of properly processing the print job by comparing information contained in the updated job ticket and the current configuration information of the digital printer (see Fig. 1 and paragraphs 29-30, 33 lines 2-74, 45-48, and 56).

Regarding claim 18, Roztocil further discloses the preflight module providing the print job and updated job ticket to the digital printer (see paragraphs 46-48).

Regarding claim 19, Roztocil further discloses the digital printer reading the updated job ticket and verifying that the digital printer can process the print job according to instructions contained in the updated job ticket (see paragraphs 46-48).

Regarding claim 20, Roztocil further discloses the digital printer providing updates as to printing status to the designer location and the print service provider location via the closed-loop communication link (see paragraph 45 lines 1-6).

5. Claims 3 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roztocil and Kemp.

Roztocil and Kemp do not disclose expressly wherein the automated packaging device is assigned a unique identifier.

10/635,479

Art Unit: 2625

However, it is well known in the art for printers, finishing/packaging devices to have unique identifiers, such as IP addresses, URLs, MAC addresses, etc. to allow the device to be identified and allow data to be easily transferred to and from the device.

Therefore, at the time of the invention, it would have been obvious to a person of ordinary skill in the art to assign a unique identifier to the automated packaging device of Kemp because it would allow the device to be easily and accurately identified and also allow data to be easily and accurately transferred to the device.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark R. Milia whose telephone number is (571) 272-7408. The examiner can normally be reached M-F 8:00am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Twyler L. Haskins can be reached at (571) 272-7406. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.
